**Texas Scottish Rite Hospital for Children Selects RedCannon KeyPoint
Alchemy for Critical Care of Precious Patient Data**

*Hospital Standardizes on KeyPoint-Enabled USB Devices to Help Manage and Secure
Sensitive Information*

FREMONT, Calif., July 10, 2007 – RedCannon Security, a trusted provider of centrally-managed, secure mobile-access solutions for the enterprise, today announced that Texas Scottish Rite Hospital for Children (TSRHC) has selected RedCannon KeyPoint Alchemy to ensure the encryption and protection of data kept on USB storage devices carried by physicians and other staff members.

Texas Scottish Rite Hospital for Children recognized the need for implementing and enforcing mobile data security policies to balance staff efficiency with information security. The hospital implemented KeyPoint Alchemy from RedCannon which enables the transformation of any off-the-shelf USB device into a fully-managed, encrypted and protected data storage solution. With the RedCannon technology, the hospital can also deliver application and security policy updates directly to authorized devices to keep all parties informed and up-to-date.

“The adoption of USB flash drives has introduced faster copy times and increased mobile data storage to many of TSRHC's medical staff,” said Hunt Gregg, Director of Information Systems for Texas Scottish Rite Hospital for Children. “Unfortunately, the diminutive size of a USB flash drive comes with the risk of loss. After researching several options, TSRHC decided to use RedCannon's technology for mobile data protection. While allowing TSRHC to use non-proprietary USB flash drives, it also extends secure provisioning as well as remote terminations and security updates.”

As healthcare organizations continue efforts to expand the use of electronic health and medical records they must make security a top priority. Additionally, more than 30 states, including Texas, have adopted data breach notification laws requiring organizations to notify consumers whose personal information has been exposed in a data breach. Data copied or distributed without authorization can result in serious challenges including identity theft, loss of employment, financial damages, and fines.

“HIPAA legislation requires that devices capable of storing medical records must be proactively managed and encrypted to prevent the possible loss or misuse of the information,” said Vimal Vaidya, founder, chairman and CEO of RedCannon. “By implementing the RedCannon technology, Texas Scottish Rite Hospital for Children has taken a necessary proactive step in maintaining the protection of sensitive information against unauthorized access, use, disclosure, modification, and destruction.”
